Rail Transit & Population Density

Major rail transit line
Station

0 People per square kilometre 30,000+

50km 100km

To account for varying topography and water in each region, the "urban population" is the total number of people living only in areas with a population density of more than 400 people/km².

Rail transit on these maps includes regional rail, commuter rail, metro, and light rail transit (LRT). Urban residents are "near rail transit" if they are within 1km of a rail transit station on these routes.
